Key Setting Note:

The R50 lacks IBIS, so your handholding technique is critical—brace your elbows against your body, lean against a wall, or use a monopod if the venue allows. The RF 50mm f/1.8 STM is the essential lens; at f/1.8 it gathers four times more light than the kit zoom, but it has no IS, so treat 1/125s as your floor. Set White Balance to Tungsten under warm indoor bulbs, or Kelvin Custom 3200-3800K if the tungsten preset feels too cool. Enable Silent Shooting for intimate moments (speeches, toasts) and shoot in short bursts of 5-10 frames—in low light, a burst increases your chances of a sharp keeper when focus or motion blur is more likely. Accept that ISO 6400 will show grain; a grainy sharp image beats a clean blurry one every time.

Inner Signal Note:

"The R50 was not built for low-light events. It was built to be affordable, compact, and accessible. Yet it carries Canon's color science and an AF system that sees faces in near darkness. The limitations are real. The capability is also real. Use a fast lens. Hold it steady. Trust the eye detection. The moments are what matter. The grain is part of the story."
