Key Setting Note:

Golden hour is where the R50 produces portraits that feel genuinely premium—the warm, directional light flatters skin tones and creates natural rim light. Use the Daylight white balance preset to preserve the natural golden warmth; avoid Auto WB, which tries to neutralize the very light you're chasing. The RF 50mm f/1.8 STM wide open at f/1.8 produces soft, circular bokeh as the warm golden background compresses behind your subject. Position your subject with the sun behind them or at a 45-degree angle for a rim light effect. Use Spot Metering linked to the focus point to expose for the subject's face; the bright golden background will bloom naturally into a warm, glowing wash. The R50 lacks IBIS, but at 1/500s this is irrelevant—shutter speeds are naturally fast enough to eliminate camera shake.

Inner Signal Note:

"The golden light is temporary. The R50 is light enough to chase it. Use the fast lens. Trust the color science. The sun will not wait, and the warmth will not return. Shoot now. The moment is as fleeting as the light."
