Tungsten

Key Setting Note:

The Canon R6 Mark II's 40fps electronic shutter is a genuine event photography advantage. When the light is changing rapidly and expressions are fleeting—a laugh caught in warm backlight, a champagne toast at sunset—the R6 II can capture a sequence of 40 frames in a single second, and at least one of those frames will be the decisive moment. Use the electronic shutter silently during ceremonies or quiet moments; the R6 II's sensor readout is fast enough to minimise rolling shutter distortion in most natural-light scenarios. Set Subject to Detect to People, Eye Detection to Auto, and AF Case to 1 (Versatile). The R6 II's Custom Shooting Modes (C1/C2/C3) are extremely useful for indoor events—set C2 to Manual + Auto ISO, f/2.8, 1/500s, Tungsten WB, Continuous High, Face/Eye AF. One dial turn jumps you to a reliable indoor event configuration instantly.

Inner Signal Note:

"Forty frames per second. Forty chances to capture the moment the warm light touches the subject's face. The R6 II will not miss. Your presence is the only variable. The machine handles the burst. You handle the moment. The warmth is temporary. The frame is permanent."
