Key Setting Note:

Bright natural light is where the R6 Mark II performs its portrait work with the fewest constraints. The 24-megapixel sensor delivers clean, detailed files, and the Dual Pixel CMOS AF II with Eye Detection works at its fastest and most confident in bright, contrasty light. Canon's color science renders skin tones with a warm, pleasant cast under direct sunlight. Set Subject to Detect to People, Eye Detection to Auto, and AF Case to 1 (Versatile) for portraits where the subject may move slightly. For backlit bright natural portraits, use Evaluative Metering linked to the focus point—Canon's metering will expose for the subject's face, and the bright background will bloom naturally into a clean, airy wash without underexposing the subject.

Inner Signal Note:

"Bright light forgives everything. The R6 II needs no high ISO ceiling, no tripod, no compromises. It simply needs a fast lens and your eye. The light is free. The subject is present. The camera is ready. The only variable is whether you raise it to your eye and press the shutter when the moment arrives."
