ISO

→ 100

Focus Mode

→ Single AF

Drive Mode

→ Single Shot +
2-Second
Self-Timer

White Balance

→ Daylight

Key Setting Note:

Bright natural light is the most forgiving real estate condition. The R6 Mark II's 24-megapixel sensor and exceptional dynamic range deliver clean, detailed files that are more than adequate for listing photos. Use the Electronic Level (assign to a function button) to keep verticals perfectly straight—tilted walls are the single most common amateur mistake in real estate photography. For rooms with bright windows and darker interior corners, bracket exposures (3 shots, ± 1.5 EV) and blend later for a balanced final image. The R6 II's Evaluative Metering is reliable in bright light. Focus approximately one-third of the way into the room to maximize front-to-back sharpness at f/8–f/11. A tripod is recommended for critical listing photos, though the R6 II's IBIS allows handheld at 1/125s with a steady stance.

- Inner Signal Note:

"Bright natural light forgives everything. The R6 II needs no high ISO ceiling, no tripod if the light is strong enough. It simply needs the ultra-wide lens, a straight vertical, and the patience to find the angle that makes a stranger imagine their life in this room. The camera is ready. The room is waiting."
