Key Setting Note:

The Canon R6 Mark II's 24-megapixel sensor and exceptional low-light handling make it a capable real estate camera. Enable Focus Bracketing for rooms requiring front-to-back sharpness—the camera will automatically capture a series of images at incrementally adjusted focus distances, which you can later blend in Canon's Digital Photo Professional or third-party software. Use the Electronic Level (assign to a function button) to keep verticals perfectly straight. For high-dynamic-range rooms with bright windows and darker corners, bracket three exposures (± 1.5 EV) and blend later. The R6 II's IBIS allows handheld at surprisingly slow speeds, but for critical listing photos, a tripod is still recommended. Enable Long Exposure Noise Reduction to reduce hot pixels in shadow areas.

Inner Signal Note:

"The R6 II will capture the room faithfully. The tripod will hold it steady. Your only task is to find the angle that makes a stranger imagine their life in this space. The focus bracketing handles the depth. The IBIS handles the shake. You handle the perspective. The room is not a subject—it is a future."
