Key Setting Note:

The Canon R6 Mark II's 40fps electronic shutter captures peak action—the ball leaving the hand, the finish-line lean—without missing a frame. The sensor readout is fast enough that rolling shutter distortion is minimal. Set Subject to Detect to People, Eye Detection to Auto, and AF Case to 2 (Continue to Track Subjects, Ignoring Obstacles) to keep AF locked on the primary athlete. Enable Pre-shooting (Raw Burst Mode) to capture frames from 0.5 seconds before you fully press the shutter—in sports, the decisive moment often happens before your reaction time. Save a dedicated sports setup in C1/C2/C3: Shutter Priority, 1/500s, Auto ISO, 40fps electronic shutter, Subject Tracking. One dial turn and the camera is ready.

Inner Signal Note:

"Forty frames in a single second. The action will unfold faster than you can react. The R6 II will capture it all—the jump, the swing, the finish. The machine handles the speed. You handle the anticipation. The grain will be visible in dim gymnasium light. Accept it. The decisive moment is not found in burst rate—it is found in anticipation. The camera is ready. The question is whether you are watching closely enough to press the shutter when it matters."
