Key Setting Note:

The R6 Mark II's 40fps electronic shutter and autofocus down to -6.5 EV make it exceptionally capable in dim gymnasium light. Set Subject to Detect to People, Eye Detection to Auto, and AF Case to 2 (Continue to Track Subjects, Ignoring Obstacles) to keep AF locked on the primary athlete. Enable Pre-shooting (Raw Burst Mode) to capture frames from 0.5 seconds before you fully press the shutter—the decisive moment often happens before your reaction time. The 40fps burst increases the odds of a sharp frame in low-light motion. The sensor's dual-gain architecture delivers clean files at moderate ISOs, but at ISO 12800, grain is visible—accept it. A grainy, sharp frame is infinitely better than a clean blurry one. Shoot JPEG (Fine) or C-RAW to extend the buffer.

Inner Signal Note:

"The R6 II will see in near darkness. It will track the athlete, hold the focus, and deliver the frame—but it will not anticipate the play. Forty frames per second. Forty chances. The decisive moment belongs to the photographer who is ready, not the one who sprays. The grain will be visible. Accept it. The moment—the leap, the dive, the finish—is worth the noise."
