Key Setting Note:

Golden hour events—sunset weddings, garden receptions, evening cocktail hours—are where the Sony A6700's compact size, AI-powered autofocus, and lightweight body shine. The warm, directional light flatters skin tones and creates natural rim light on guests. The AI-powered Human Pose Estimation tracks faces tenaciously through the warm, contrasty golden light, allowing you to focus on composition and connection rather than focus points. Use the Daylight white balance preset to preserve the natural golden warmth; avoid Auto, which may try to neutralise the very light that makes these images special. For backlit golden hour scenes, use Spot Metering linked to the focus point to expose for faces; the bright golden background will bloom naturally into a warm, glowing wash without underexposing your subjects. The FL (Film Look) Creative Look profile adds a cinematic quality that works beautifully in golden hour light, preventing skin tones from appearing overly bronzed while retaining warmth. The A6700's compact size and fully articulating screen allow you to move quickly through the event and shoot from low angles as the light shifts. Enable Silent Shooting for quiet, intimate golden-hour moments where a mechanical shutter would break the atmosphere.

Inner Signal Note:

"The golden light is temporary. The A6700 is light enough to chase it. The AI will track the faces. The IBIS will steady the frame. The warm light will not wait, and the warmth will not return. The machine handles the tracking. You handle the presence. The frame is yours to take."
