Key Setting Note:

Golden hour is where the Sony A6700's AI-powered autofocus and compact, lightweight body shine. The warm, directional light flatters skin tones and creates natural rim light that separates the subject from the background. The A6700's AI-powered Human Pose Estimation tracks the subject's face tenaciously through the changing golden light, allowing you to focus on composition and connection. Use the Daylight white balance preset to preserve the natural golden warmth; avoid Auto, which may try to neutralise the very light you are chasing. For backlit golden hour portraits, use Spot Metering linked to the focus point to expose for the subject's face; the bright golden background will bloom into a warm, glowing wash without underexposing the skin. The FL (Film Look) Creative Look profile adds a subtle cinematic quality that works beautifully with golden hour light, preventing skin tones from appearing overly bronzed while retaining warmth. The A6700's compact size and fully articulating screen allow you to move quickly and shoot from low angles as the light shifts.

Inner Signal Note:

"The golden light is temporary. The A6700 is light enough to chase it. The AI will track the face. The IBIS will steady the frame. But the real tool isn't the technology—it's the space it creates for you. When you stop checking the focus and start watching the light, the moment, and the person in front of you, the camera disappears. The warmth will not return once it fades. The machine will handle the tracking. You handle the presence."
