

- Camera Model Sony A6700
- Scenario Real Estate
- Lighting Condition Indoor Artificial

### Recommended Mode

Aperture Priority

### Shutter Speed

1/30s-1/60s

### Aperture

f/8-f/11

### ISO

100

### Focus Mode

Single AF

### Drive Mode

Single Shot

### White Balance

Tungsten

## Key Setting Note:

The A6700's APS-C crop factor creates a real estate challenge—a 16mm lens produces a full frame equivalent of 24mm, the absolute minimum for interiors. Two solutions exist: the Sigma 10-18mm f/2.8 DC DN (15-27mm equivalent) or the Sony E 10-20mm f/4 G PZ (15-30mm equivalent with power zoom for video walkthroughs). Set White Balance to Tungsten under household bulbs or Kelvin Custom 3200-3800K for mixed lighting. The Sweep Panorama mode (Scene > Sweep Panorama) can capture rooms too small for even 10mm, though it produces JPEG-only results. Focus one-third into the room at f/8-f/11 to maximize depth of field. The A6700's base ISO 100 on a tripod produces files with enough dynamic range to recover shadows in post.

## Inner Signal Note:

“The crop factor is not a limitation. It is a specification that demands a different lens decision than full frame operators make. The operator who arrives with the correct wide angle lens captures the room in a single frame. The operator who arrives with a 16mm kit zoom backs against the wall and still cannot fit the bathroom. This failure was specified before walking through the door—and it was avoidable. Specification happens before you enter the property. The room will not change to fit the lens you brought. Bring the lens that fits the room.”
