Key Setting Note:

The A7IV's AF Subject Shift Sensitivity is critical for events. Set it to 1 (Locked On) for tracking a specific subject through a crowd — the camera will resist jumping to other faces. Set it to 5 (Responsive) for quickly switching between different subjects as the scene changes. Assign "Subject Shift Sensitivity" to a custom button so you can toggle between these two modes instantly as the situation demands. Enable Silent Shooting for ceremonies; the A7IV's electronic shutter is fast enough for most event work without rolling shutter distortion.

Inner Signal Note:

"Events are not about photography. They are about people. The A7IV will track the eyes, hold the focus, and deliver the frame — but it will not read the room. That is your work. The golden light is temporary. The AF system is not. Let the machine track the eyes. You track the moments. One button, one toggle, and the camera shifts from tracking a single face to scanning the room. The technology is ready. The question is whether you are watching closely enough to press the shutter when the moment arrives."
