Key Setting Note:

The A7IV's 10fps mechanical burst is adequate for most events, but its real strength is the AF system inherited from the A1/A7R V lineage. Set "AF Track Sens" to 2 (Responsive) for events where subjects move unpredictably. Use "AF Area" set to "Tracking: Expand Spot" — place the initial focus point on your subject and the camera will track them across the frame. For backlit event scenes, enable Zebra Display set to 100+ to protect highlight detail. The A7IV's electronic shutter is fast enough for most event work without rolling shutter distortion, so enable Silent Shooting for ceremonies and speeches where a mechanical click would be intrusive.

Inner Signal Note:

"Low light events test the operator more than the camera. The A7IV will see faces in near darkness, track eyes through crowds, and deliver sharp frames at ISO 6400. But it will not manage your breathing, settle your hands, or steady your composure. The stillness before the shutter is yours. The machine handles the focus. You handle the presence."
