Key Setting Note:

The A7IV's 33-megapixel sensor provides a meaningful resolution advantage over 24-MP bodies for real estate—more detail in textures, fixtures, and views, plus more latitude for perspective correction in post. Use the Electronic Level (assign to a custom button) to keep verticals perfectly straight. Enable Focus Magnifier to check critical focus on distant architectural details. For rooms with bright windows and darker interiors, use the A7IV's DRO/Auto HDR setting—DRO Lv5 will automatically lift shadows while preserving highlights, giving a balanced JPEG straight out of camera. For maximum quality, bracket manually (3 shots, ±1.5 EV) and blend later. Use the 2-Second Self-Timer to eliminate vibration when pressing the shutter button.

Inner Signal Note:

"The A7IV is a documentarian's camera. In real estate, it documents spaces with fidelity. It will capture the room, the light, and the detail—but it will not straighten the verticals or frame the shot for you. The resolution is a gift, but only if you use it with intention. Let its resolution and dynamic range do the work. You simply frame the truth."
